

Are you a young woman age 15—17?

Make a difference in the fight against HIV

Project iMatter is a research study looking to find out if a vaginal ring containing a medicine called dapivirine is safe and acceptable for young women

Young women will be asked to:

- Use a vaginal ring every day for about 12 weeks
- Visit the clinic every month to get a new ring
- Answer questions about health and ring use
- Have health exams, lab tests, pregnancy tests and/or HIV tests at some visits

Your participation in this study is completely voluntary

You will be paid for your time

Got a minute?

Take the online questionnaire to
see if you are eligible!

*Call, text, or email for
